 **March 2, 2021 | 7:00 - 8:00 pm MST**

Description

This webinar will review the latest evidence on the impact of hospital-based malnutrition and effective methods to detect, prevent and treat this debilitating condition in hospital and post discharge. It will include cutting-edge research that has been conducted by the Canadian Malnutrition Task Force over the last decade. Evidence-based protocols, pathways and tools aimed at tackling malnutrition that can be used by primary care teams will be highlighted.

Learning Objectives

By the end of the webinar, participants will learn about the

- Key evidence on the impact of hospital malnutrition
- Evidence based approaches that can be adopted in the hospital and community to minimize malnutrition risk
- Tools and resources aimed at detecting, treating and preventing malnutrition that can easily be integrated into primary care
